

PASHUSETU: VETERINARY TRIAGE SUMMARY

AI-Assisted Bovine Disease Assessment & Triage

Owner / Farmer:	Ramesh Kumar	Cattle Tag / ID:	#COW-145
Assessment Date:	17 Aug 2026, 11:44 AM	Language:	English

Clinical Assessment & First-Aid Guidelines

[Obs] 1. Verification & Clinical Observations

- Confirmation: The provided image does not show cattle or bovine livestock. It appears to be a close-up photograph of a wooden surface (likely a fence or wall) with visible wood grain, knots, and "alamy" watermarks.
- Observations: There are no biological tissues, skin, lesions, swelling, or discharge visible. The image is of an inanimate object.

[Dx] 2. Suspected Condition & Confidence

- Disease Name: N/A (Image is not of an animal)
- Confidence Level: High (regarding the identification of the image content as wood, not livestock)

[Markers] 3. Diagnostic Markers

- No clinical markers can be identified as the subject is inanimate wood.

[Care] 4. Immediate First-Aid & Farm Management

- Action: Please upload a clear photograph of the actual animal showing the affected area.
- Note: Accurate diagnosis requires visual confirmation of the animal's skin, eyes, or mouth.

Disclaimer: AI triage assistant only. Always consult a licensed veterinarian for definitive treatment.

Disclaimer: PashuSetu AI provides preliminary automated triage support only. Always consult a licensed veterinary doctor for laboratory confirmation, prescription antibiotics, and definitive therapy.
